

AMALITECH CSR · COMMUNITY DEVELOPMENT PROGRAMMES

Capstone Internship Programme

Welcome to your five weeks of building something real.

Intern Briefing · Cohort 1 · 26 August – 2 October 2026

What this programme is

1

You build one real product

In a small team, tied to a genuine community need in Ghana — not a practice exercise.

2

You work to weekly milestones

Five gates across five weeks. Each week has one clear thing to reach.

3

You review and document it

Week 4 is about making the work solid, tested, and understandable to others.

4

You present and share insights

Week 5 you demo it to AmaliTech staff and peers, and say what you learned.

STRUCTURE

The shape of your five weeks

BUILD

REVIEW

SHARE

Weeks 1-3

Week 4

Week 5

Scope it, build it,
reach feature-complete.

Review, fix, test,
and document.

Demo it and share
what you learned.

Wk 5

Before Week 1: onboarding runs Wed 26 – Fri 28 August — setup, teams, and choosing your capstone. Delivery weeks then run Mondays, 31 Aug to 2 Oct.

01

Your capstone project

One team. One real product. Five weeks.

What you could build

Your team picks one theme, grounded in a real Ghanaian community need.

● Community data dashboard

Crop or market prices, school attendance, sanitation tracking.

● Artisan or co-op directory

A web or mobile directory for local artisans, vendors, or a farmer cooperative.

● Cyber-safety toolkit

Security awareness materials for a partner school or a small business.

● Community service prototype

A UI/UX prototype — clinic booking, market info, transport.

● Digital literacy pack

Learning resources aimed at JHS learners or first-time device users.

● Your team's proposal

Have a better idea that fits the brief? Pitch it at scoping in Week 1.

HOW TEAMS WORK

You'll work in mixed teams

Everyone brings different experience. Teams of 4-5 mix both streams, so you contribute at a level that fits you — and learn from each other.

FOUNDATIONS

Still building your fundamentals

- Work from a starter template with more scaffolding
- Own and finish a defined feature end-to-end
- Get support from your Builder team lead

BUILDERS

Ready to own scope and lead

- Own a component end-to-end and drive integration
- One Builder per team leads it and reports weekly
- Mentor your Foundations teammates as you go

You're assessed against your own stream's expectations — never against each other. And your stream isn't fixed: step up mid-programme if you're ready.

02

How each week runs

Fully online, part-time, with one milestone a week.

Your weekly rhythm

The programme is fully online at around 20 hours a week. Two live sessions anchor the week; the rest is your own build time.

- **Start of week**
Live kick-off with your team — goals, this week's milestone, who does what.
- **Mid-week**
Live work-session — integration, pairing, and a mentor touchpoint for unblocking.
- **Throughout**
Independent build time. Post updates on the shared board as you go.
- **Friday, end of day**
Submit your weekly progress form. This one is not optional.

Stuck? Ask your Builder team lead first — most blockers get solved there. Then your mentor, then the Programme Lead.

WHAT WE ASK OF YOU

The Friday progress form

We won't check in daily — so this is how we know how you're doing. Honest beats impressive.

A Team progress

One per team — your Builder lead submits it.

- This week's milestone + status
- What you completed, what carries over
- Blockers, and what you already tried
- Help needed — and by when

B Your own pulse

One per person — takes two minutes.

- What you worked on
- How confident you feel (1-5)
- Where you're stuck — "nothing" is fine
- Workload: manageable, stretched, or overwhelmed

Flag a problem and someone reaches out that week. Say nothing and we can't help.

Your five milestones

- 1** Plan approved & scaffold in place Week 1 · by Fri 4 Sep
- 2** Core feature working end-to-end Week 2 · by Fri 11 Sep
- 3** Feature-complete — then freeze Week 3 · by Fri 18 Sep
- 4** Reviewed, fixed & documented Week 4 · by Fri 25 Sep
- 5** Demo delivered + insights shared Week 5 · by Fri 2 Oct

Feature freeze at Week 3 means no new features after that — Week 4 is for making what you have solid.

03

How you're assessed

On what you build and what you learned — not attendance.

ASSESSMENT

What counts

60%

The capstone product

20%

Your demo & insights

10%

Weekly participation

10%

Growth reflection

Your capstone is scored on five things

Does it work?

Is it well built?

Does it solve a real
need?

Did the team work
well together?

Can you explain it
clearly?

Judged on evidence — the working product, your commits, your docs, your demo. Not on hours logged.

OUTCOMES

What you leave with

A real product

Something that works, solves a genuine problem, and you can point to.

A portfolio piece

Your documented contribution — bring it to interviews.

A certificate

On satisfactory completion of the programme.

Practical experience

Teamwork, code review, documentation, and presenting your work.

Some capstones will be handed over to the community partner they were built for.

What we ask of you

- 1 Show up to the two live sessions**
They're where integration and unblocking actually happen.
- 2 Submit the Friday form, every week**
Both parts. Two minutes. It's how we spot trouble early.
- 3 Raise blockers early**
A problem named on Friday gets help on Monday. A hidden one costs you a week.
- 4 Work offline-friendly**
Connectivity varies. Keep your project runnable on your own machine.
- 5 Support your teammates**
Builders mentor Foundations. That's part of how you're assessed.

Let's build something that matters.

Onboarding starts Wednesday 26 August.

Questions? Bring them to onboarding, or ask your Builder team lead once teams are formed.
